

## 7 - Jim Lapp, Bow, WA

Medium - Steel

\$2,200.00

sculpture

Lapp, impressed by how little material is required for building a strong, metal bridge, decided to make a sculpture that is structured like a bridge. He chose to make a tangible object (existing in the real world) of the number 7. (Numbers are considered conceptual or "existing in our heads" except when you are doing math homework.)

Did you notice how the open spaces make the sculpture look light and almost invisible? The interconnecting steel pieces are placed to produce maximum support and strength despite the delicate look of the sculpture.

Do you see  
any other  
artwork that  
looks like a  
bridge?  
Maybe one  
that is  
holding up  
two chairs?
